

V4 Summer School on Smart Analytical Science 2026

5 LECTURES

7 WORKSHOPS

2 microCOURSES

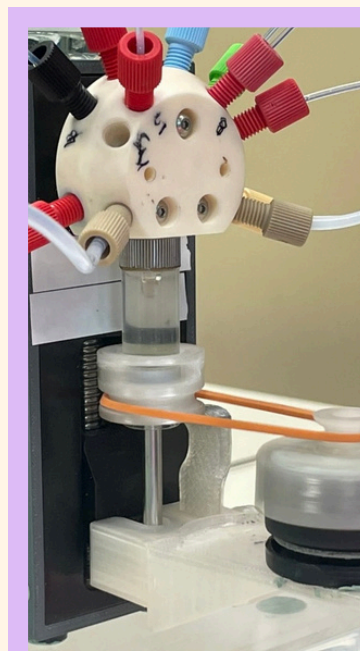

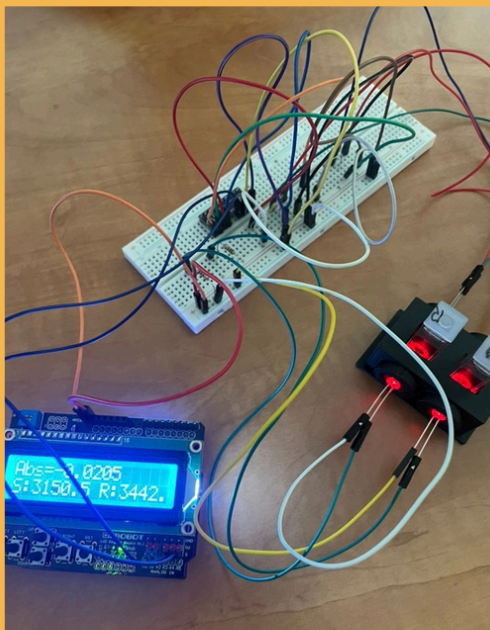

Lab-on-Paper

Paper can be much more than just something to write on!

The topic was explored first during the MicroCOURSE, covering both the technical aspects and fabrication possibilities of paper-based analytical devices.

During the Lab-on-Paper workshop, M. Fiedoruk-Pogrebniak introduced us to paper-based analytical devices and their potential applications.

From Theory to Practice

The Summer School combined inspiring lectures with hands-on workshops, giving us the opportunity to explore modern analytical chemistry from both theoretical and practical perspectives.

From Capillary Electrophoresis and Glycomics to AI-assisted method development, smart HPLC and Green Analytical Chemistry, the lectures covered a wide range of current topics.

But the real action started when we moved from the lecture room to the lab!

Smart Analytical Science

• Visegrad Fund

hunt for the lost glycans

One of the workshops turned analytical chemistry into a real investigation. During “Hunt for the Lost Glycans”, led by R. Farsang and K. Hogyor, we explored glycan analysis in a hands-on and engaging way.

A little science, a little detective work — and plenty of curiosity!

A Day at Lake Balaton

We headed to Tihany and Lake Balaton, where we could enjoy some beautiful scenery, discover the area and spend time together outside the classroom.

A little change of scenery was definitely welcome!

Welcome dinner

The first day of the summer school was full of ceremonious beginnings, with the last one during our dinner together. We got a chance to try some of traditional Hungarian food - the savory chilled strawberry soup was a surprise!

With delicious food and excellent wine we got the chance to get to know each other and start relationships that flourished until the last day.

Farewell meeting

During the week time slipped through our fingers and before we noticed it was time to say goodbye. At our last dinner together we cherished the new friendships and recalled the best moments of the summer school.

And That's a Wrap!

Five days of science, hands-on workshops, great conversations and shared experiences flew by!

Thank you to all our lecturers, workshop leaders, organisers and other participants for making this Summer School so memorable.

See you next time!

Daria Mysiak, Poznan University of Technology
Patrycja Łęgowska, Gdansk University of Technology
Karolina Hofman, Gdansk University of Technology

◆ chocolate and wine tasting ◆

One of the highlights of the social programme was a chocolate and wine tasting, made possible by SARTORIUS.

It was a perfect opportunity to take a break, relax and continue conversations in a much less formal setting.

Discovering Veszprém

Between lectures, workshops and evening events, we had the chance to discover the historic streets and atmosphere of Veszprém — adding a little local culture to an otherwise very science-filled week.
